Learning

- Explain [X] using three different real-world examples or analogies that would be easy for a beginner to understand.
- I want to learn about [X]. Identify the most important 20% of learnings from this topic that will help me understand 80% of it.
- I am learning about [X]. Convert the key lessons from this topic into engaging, emotional stories and metaphors to aid my memorization.
- Help me create mental associations or mnemonic devices to remember key information about [X].
- Explain [X] as if you were talking to a 5-year-old child. Use simple language and everyday examples. [1]
- I want to learn [X]. I am a complete beginner. Create a 30-day learning plan that will help a newbie like me to improve this skill.
- Create a detailed study plan for learning [X] over the course of [TIMEFRAME]. Include specific goals, resources, and milestones.

[1] Useful for any jargon-heavy topic.

Reading

- Summarize the book [X], and give me a list of the most important insights, takeaways, and actionable tips/advice from this book.

Keywords [2]

- ELI5: [3]
- TLDR: [4]
- STEP-BY-STEP: [5]
- DEEP DIVE: [6]

Pattern Recognition

- Connect these dots for me: [7]
- What story is the data telling? [8]

Pattern Interruption

- What's the loop I'm stuck in right now? [9]
- What would I not want to hear right now? [10]
- You are a CIA investigator. Your mission is to compile an in-depth intelligence report about me. The report should include a nuanced evaluation of my traits, motivations, and behaviors, but framed through the lens of potential risks, threats, or disruptive tendencies—no matter how seemingly benign they may appear.
- You are my brutally honest thinking partner. Your job is to sharpen my thinking and expose my blind spots. You are not my cheerleader or yes-man. You are the friend who grabs my arm before I walk into traffic. Every response must: translate my intent and name the self-deception behind it; dissect where my logic breaks and which assumptions are fragile; attach a price tag to what I'm avoiding; contrast my approach with what a world-class performer would actually do; give a prioritized plan starting now, including what to stop doing and a kill switch (what evidence forces a pivot); and end with the hardest question I'm dodging, forcing a choice between

[2] You don't need a paragraph to steer the model. One word is enough to set the mode.
[3] Explain it like I'm five.
[4] Condense whatever is pasted after it.
[5] The procedure as ordered, granular steps.
[6] Exhaustive treatment of one topic: the mechanism, edge cases, caveats, where it breaks.
[7] Dump in random facts. It hands back the connections/patterns/relationships hiding between them.
[8] Perfect for anything with numbers. It finds narratives hidden in spreadsheets, habits, whatever you throw at it.
[9] Turns the lens on your own framing.
[10] Opens the door to the uncomfortable truths you're avoiding.

2–4 concrete options. No flattery, no softening, no "to be fair,"no lectures —concrete language, sharp hits, real-world analogies for fallacies, and if my plan is solid, stress-test it harder. Leave me seeing something I missed, even if it stings.

Insights

- What else should I know? [11]
- What would you do in my shoes? [12]
- Let's think about this differently. [13]
- Play devil's advocate against yourself. [14]
- What's the counterintuitive move here? [15]

Inversion

- What would I regret not knowing? [16]
- What am I not seeing here? [17]

General

- Give me v2 [18]
- I'm probably wrong, but…[19]
- What's the 80/20 here? [20]

Self-testing

- I am trying to learn about [X]. I understand that teaching is the most effective way to learn, so I am going to begin my learning process with the intent of teaching you this material along the way. You are to act as an educated individual uninitiated on the specific topic I am covering. Please ask clarifying questions, point out gaps, or question logic as you see fit within that context.

[11] Adds context and warnings you never thought to ask for.
[12] Stops it being a neutral helper and gets an actual opinion —better than a balanced list of options.
[13] Stops it reaching for the default answer. Same question, fresh track.
[14] Makes it argue both sides of its own answer. You get the full picture instead of just the obvious take.
[15] Gets past obvious advice to weird strategies that actually work. "What's the counterintuitive move for networking?"reveals approaches nobody else uses.
[16] This hits different than "what else should I know."It focuses on future regret, which makes AI think about consequences you're blind to.
[17] Finds the assumptions under your own framing.
[18] Instead of saying "improve this,"ask for a specific version. "Give me v2"frames it as a fresh take, not a fix —and AI treats it like a revision, not a critique.
[19] It stops being defensive and starts collaborating.
[20] Cuts through the noise to identify the 20% of effort that delivers 80% of the value.

- Generate a 10-question quiz on [X], including a mix of multiple-choice, true/false, and short-answer questions. Provide answers and brief explanations for each question.
- [PASTE YOUR NOTES] Ask me a series of open-ended, short-answer, minimal-prompt questions to test my understanding of the provided material.

Travel

- List the top cities in [COUNTRY], and anthropomorphize each one, listing the good-natured stereotypes and jokes that other people in [COUNTRY] say about people in this city.
