Self-testing	4
Travel	4

Learning

- Explain [X] using three different real-world examples or analogies that would be easy for a beginner to understand.
- I want to learn about [X]. Identify the most important 20% of learnings from this topic that will help me understand 80% of it. Also, list the most valuable online learning resources that could help me to get the most out of this topic.
- I am learning about [X]. Convert the key lessons from this topic into engaging, emotional stories and metaphors to aid my memorization.
- Help me create mental associations or mnemonic devices to remember key information about [X].
- Explain [X] as if you were talking to a 5-year-old child. Use simple language and everyday examples. ¹
- I want to learn [X]. I am a complete beginner. Create a 30-day learning plan that will help a newbie like me to improve this skill.
- Create a detailed study plan for learning [X] over the course of [TIMEFRAME]. Include specific goals, resources, and milestones.

¹Useful for any jargon-heavy topic.

Reading

- Summarize the book [X], and give me a list of the most important insights, takeaways, and actionable tips/advice from this book.

Keywords

- ELI5: ²
- TLDR: ³
- STEP-BY-STEP: ⁴
- DEEP DIVE: ⁵

Pattern Recognition

- Connect these dots for me: ⁶
- What story is the data telling? ⁷

Pattern Interruption

- What's the loop I'm stuck in right now? ⁸
- What would I not want to hear right now? ⁹
- You are a CIA investigator. Your mission is to compile an in-depth intelligence report about me. The report should include a nuanced evaluation of my traits, motivations, and behaviors, but framed through the lens of potential risks, threats, or disruptive tendencies—no matter how seemingly benign they may appear.
- You are my brutally honest thinking partner. Your job is to sharpen my thinking and expose my blind spots. You are not my cheerleader or yes-man. You are the friend who grabs my arm before I walk into traffic. Every response must: translate my intent and name the self-deception behind it; dissect where my logic breaks and which assumptions are fragile; attach a price tag to what I'm avoiding; contrast my approach with what a world-class performer would actually do; give a prioritized plan starting now, including what to stop doing and a kill switch (what evidence forces a pivot); and end with the hardest question I'm dodging, forcing a choice between 2–4 concrete options. No flattery, no softening, no “to be fair,” no lectures —concrete language, sharp hits, real-

²Explain it like I'm five.

³Condense whatever is pasted after it.

⁴The procedure as ordered, granular steps.

⁵Exhaustive treatment of one topic: the mechanism, edge cases, caveats, where it breaks.

⁶Dump in random facts. It hands back the connections/patterns/relationships hiding between them.

⁷Perfect for anything with numbers. It finds narratives hidden in spreadsheets, habits, whatever you throw at it.

⁸Turns the lens on your own framing.

⁹Opens the door to the uncomfortable truths you're avoiding.

world analogies for fallacies, and if my plan is solid, stress-test it harder. Leave me seeing something I missed, even if it stings.

Insights

- What else should I know? ¹⁰
- What would you do in my shoes? ¹¹
- Let's think about this differently. ¹²
- Play devil's advocate against yourself. ¹³
- What's the counterintuitive move here? ¹⁴

Inversion

- What would I regret not knowing? ¹⁵
- What am I not seeing here? ¹⁶

General

- Give me v2 ¹⁷
- I'm probably wrong, but... ¹⁸
- What's the 80/20 here? ¹⁹

¹⁰Adds context and warnings you never thought to ask for.

¹¹Stops it being a neutral helper and gets an actual opinion —better than a balanced list of options.

¹²Stops it reaching for the default answer. Same question, fresh track.

¹³Makes it argue both sides of its own answer. You get the full picture instead of just the obvious take.

¹⁴Gets past obvious advice to weird strategies that actually work. "What's the counterintuitive move for networking?" reveals approaches nobody else uses.

¹⁵This hits different than "what else should I know." It focuses on future regret, which makes AI think about consequences you're blind to.

¹⁶Finds the assumptions under your own framing.

¹⁷Instead of saying "improve this," ask for a specific version. "Give me v2" frames it as a fresh take, not a fix —and AI treats it like a revision, not a critique.

¹⁸It stops being defensive and starts collaborating.

¹⁹Cuts through the noise to identify the 20% of effort that delivers 80% of the value.

Self-testing

- I am trying to learn about [X]. I understand that teaching is the most effective way to learn, so I am going to begin my learning process with the intent of teaching you this material along the way. You are to act as an educated individual uninitiated on the specific topic I am covering. Please ask clarifying questions, point out gaps, or question logic as you see fit within that context.
- Generate a 10-question quiz on [X], including a mix of multiple-choice, true/false, and short-answer questions. Provide answers and brief explanations for each question.
- [PASTE YOUR NOTES] Ask me a series of open-ended, short-answer, minimal-prompt questions to test my understanding of the provided material.

Travel

- List the top cities in [COUNTRY], and anthropomorphize each one, listing the good-natured stereotypes and jokes that other people in [COUNTRY] say about people in this city.
